CONCRETE FLOORS.

Shower Space Wetroom Floor Drainage and Waterproofing System - for stylish barrier free showering

WET ROOMS

What is a Wetroom?

At Novellini we understand that you desire something more individual than just a shower room. That's why we've created a comprehensive wetroom and glass collection that features a range of both stylish and practical solutions for your home.

Our wetrooms offer all the benefits of a walk-in shower, combined with the protection offered by a shower screen or enclosure, allowing you to create a contemporary, luxurious feel to any bathroom.

Using the available space in an efficient and uncluttered manner allows you to create a truly individual showering experience, limited only by your imagination.

Peace of Mind

Our designers and engineers work with one common goal: to design and manufacture wetroom solutions that are fully integrated. From the hidden technology under the wetroom floor, to our beautifully designed glass screens and enclosures.

Lifetime Guarantee

All of our wetroom products are covered by the Novellini Product Lifetime Guarantee. Our guarantee is valid only if used with Novellini products and does not cover installation.

The Complete Package

We offer wetroom solutions for both timber and concrete floors with all systems encompassing the four key components of a wetroom:

- 1 Gradient
- 2 Drainage
- 3 Waterproofing
- 4 Glass

Key aspects of a Novellini Wetroom

1 Gradient

It is important to ensure that the floor of a wetroom has sufficient gradient in order for the water to drain away without forming puddles. Our system offers a choice of pre-formed, engineered slopes guaranteeing a perfect gradient every time.

2 Drainage

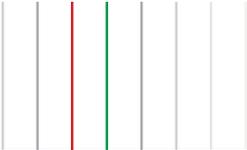

Whether you desire a contemporary linear drain or a more traditional square outlet you need to be sure that the drain is capable of taking away sufficient water to keep up with the flow from the shower head. Our drains offer the choice of an additional trap, therefore ensuring sufficient drainage is available.

3 Waterproofing

It is essential to ensure your wetroom is correctly waterproofed. All of our membranes are easy to apply and are backed up by our Lifetime Guarantee, offering complete peace of mind.

4 Glass

Our range of screens and enclosures offer almost unlimited choice, from the simplicity of a single screen right through to our full enclosures and multi-screen options.

► Choosing your floor style

The secret to a successful wetroom

The Wetroom Deck

Our range of preformed decks have been developed specifically to allow the installation of a wetroom onto a timber floor, which are quick and easy to install. Each Deck has a built-in gradient that flows towards the stylish drain to create a perfect wetroom every time.

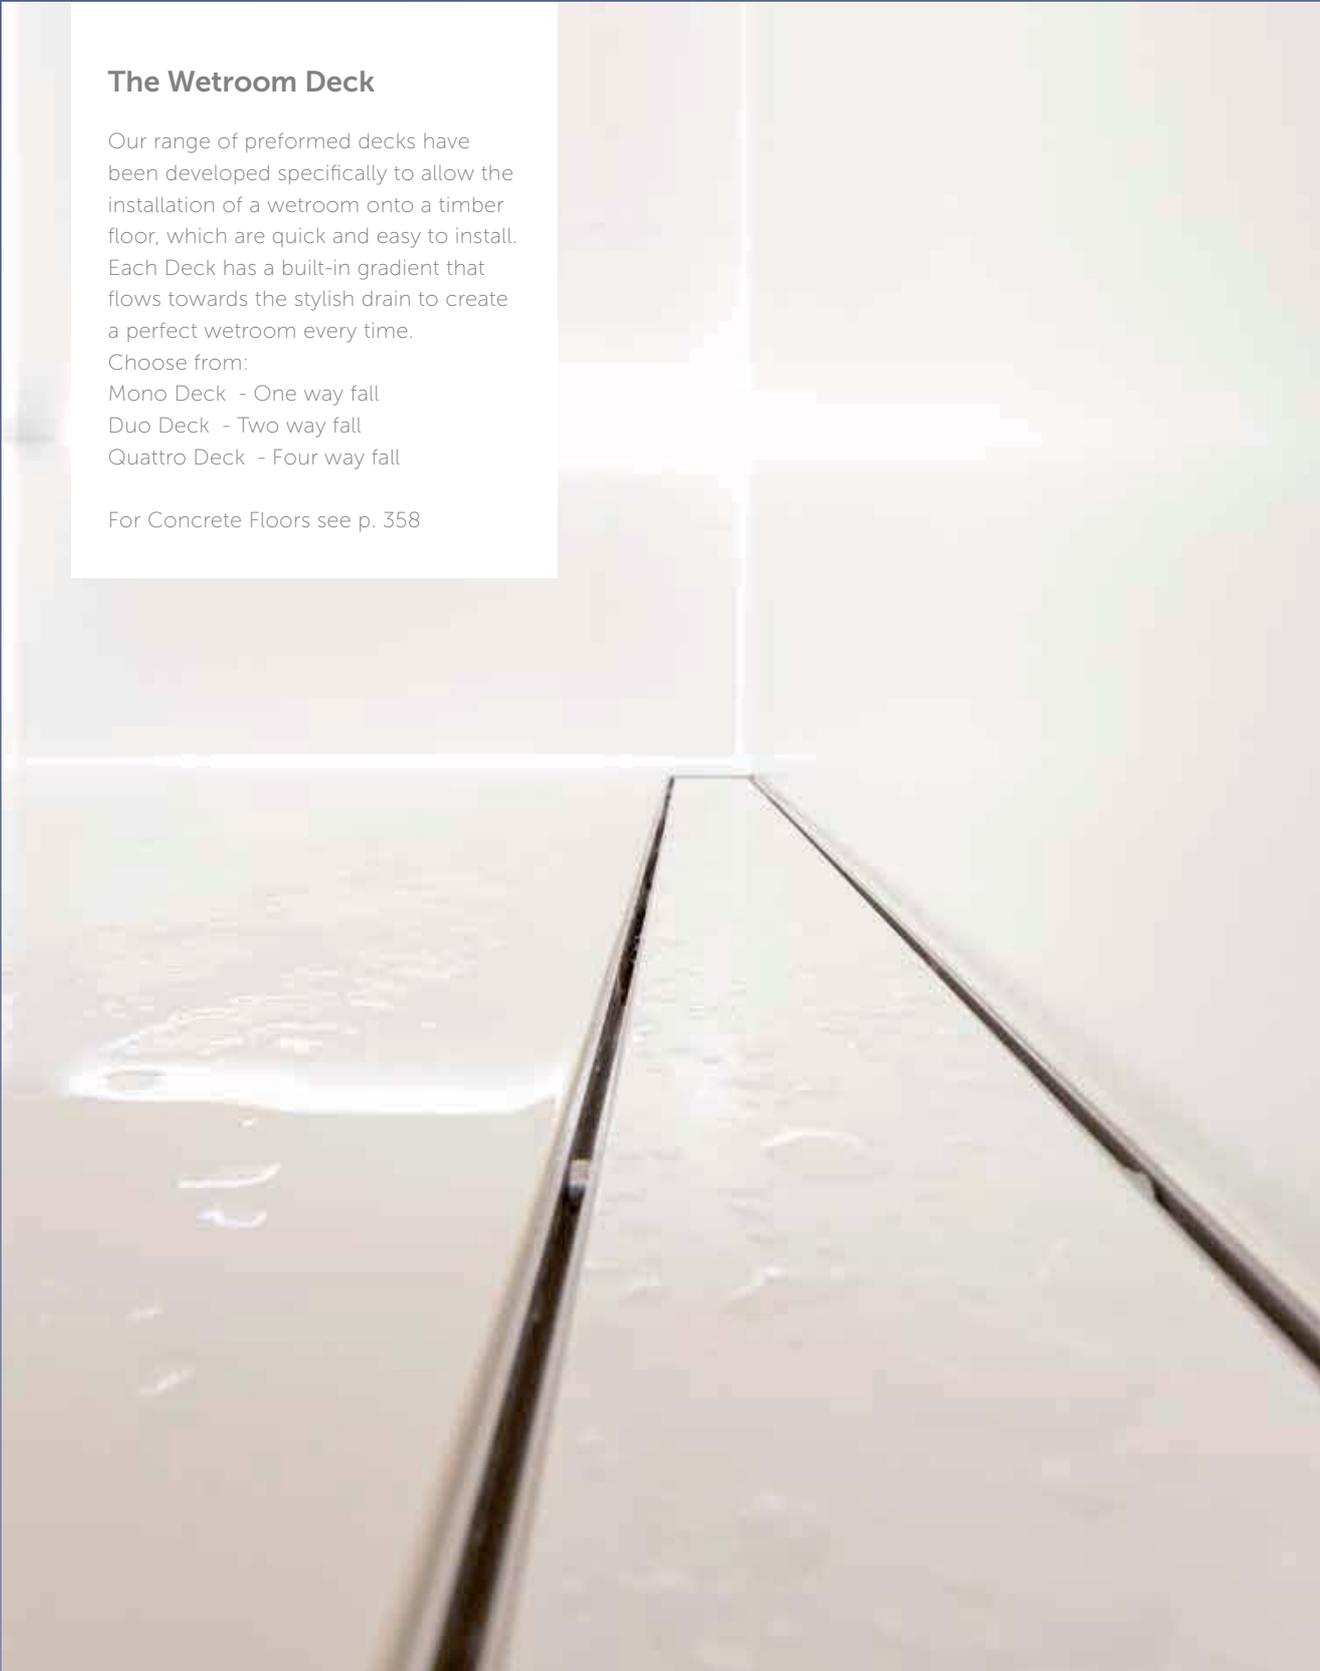

Choose from:

Mono Deck - One way fall

Duo Deck - Two way fall

Quattro Deck - Four way fall

For Concrete Floors see p. 358

Mono Deck - One way fall for large format tiles

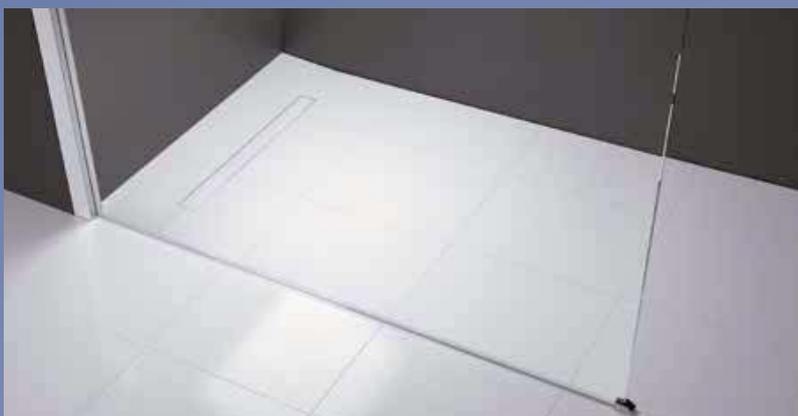

Benefits of the Mono Deck

The Mono Deck is a single slope wetroom system for timber floors, allowing the linear drain to be positioned neatly against the wall, giving a sleek stylish finish.

See p. 348 for details

Duo Deck - Two way fall for large format tiles

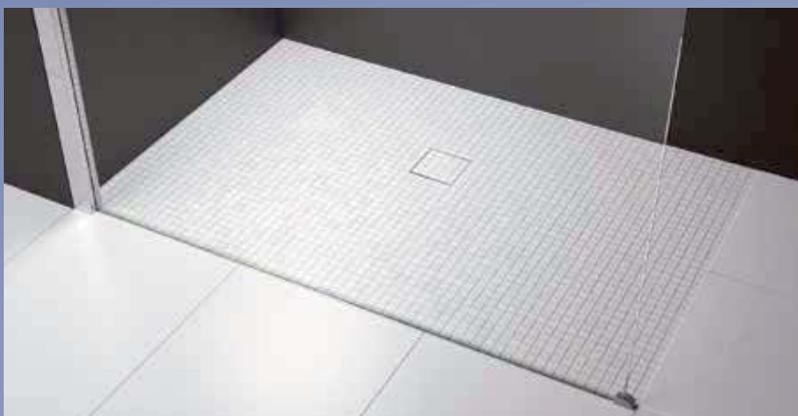

Benefits of the Duo Deck

The Duo Deck, with its contemporary linear drain, is perfect for 'large format' tiles, as there are fewer tile cuts required and hence fewer grout lines.

See p. 352 for details

Quattro Deck - Four way fall for mosaic tiles

Benefits of the Quattro Deck

The Quattro Deck, with its more traditional square drain, is better suited to smaller 'Mosaic' tiles as the tiles blend more sympathetically into the shape of the Deck.

See p. 354 for details

▶ Choosing a layout to suit your room Corner, alcove or wall layout?

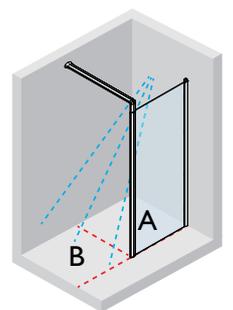

Selecting a layout

The layout of your shower room will determine the glass option required. Typically this will be either a Corner, Alcove or Wall Layout. For the Corner Layout we provide a range of options from the minimalist single panel to the complete enclosure. For the Alcove there is a choice of either a minimal screen with pivot or a single door (with a fixed panel if required). For the Wall Layout we provide a choice of fixed screens with optional side panels.

How wide should a screen be?

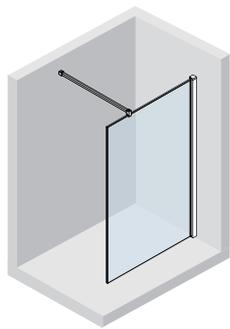

To keep water within shower area A, a minimum of 100cm is acceptable, but 120cm would be preferable. Your glass choice will also be affected by area B which is the amount of aperture you need to enter the shower area. If space is limited, a Kuadra H2 (p27) screen with pivot offers a smaller fixed panel with enhanced shielding.

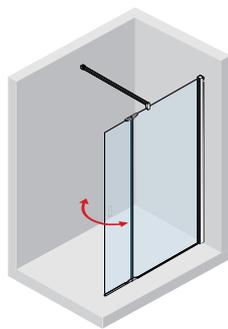

1. Corner Layout

For simplicity, select a single glass screen (Kuadra H) but ensure the width of the screen is sufficient to contain the water spray. For more control, choose a screen with a pivot (Kuadra H2) which deflects more water back into the shower area.

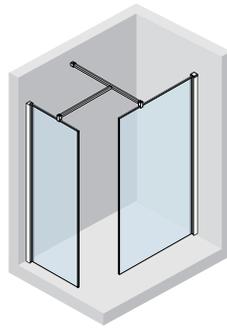

Combine screens to form your (Multi-screen) enclosure or choose a Young enclosure to completely contain the water and retain heat within the shower area.

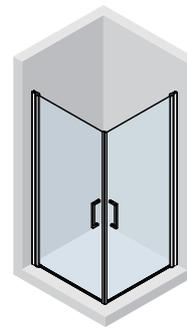

Single glass
Kuadra H

Screen with pivot
Kuadra H2

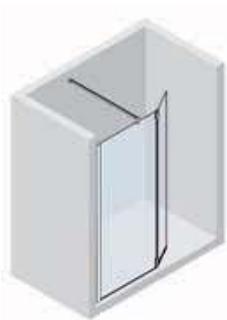

Multi-screen
Kuadra H with H or H2

Enclosure
Young

2. Alcove Layout

Where your shower area is within an alcove, we provide a minimal screen with pivot (Kuadra H2) or a single door (with fixed panel if required) (Young).

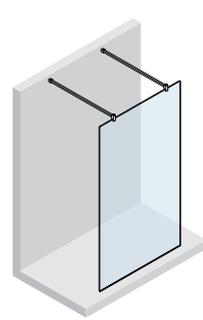

Screen with pivot
Kuadra H2

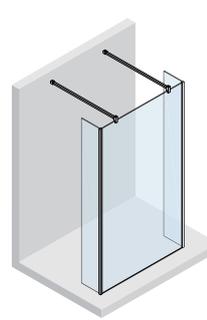

Single door (+panel)
Young

3. Wall Layout

Create the feeling of space with a wall layout - perfect for a 'dual' shower. Kuadra Wall features different screen widths along with options for fixed side panels.

Timber Floor - Guidelines

The Novellini wetroom for Timber Floors

Introduction

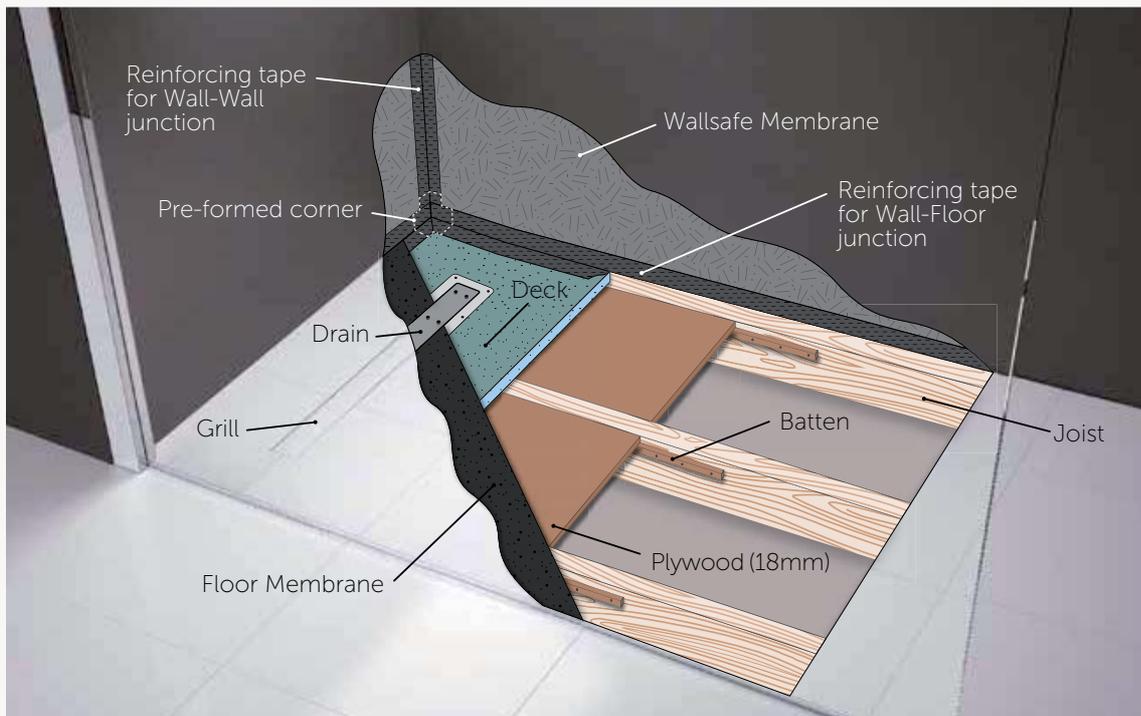

Our range of pre-formed shower Decks has been developed specifically to allow the installation of a level access wetroom on a timber floor.

Available in a range of sizes, the Deck has a pre-formed engineered slope, ensuring that water from the shower

is directed towards the integral drain, guaranteeing a perfect gradient every time.

Novellini Wetroom floor systems can be installed with electric underfloor heating (max specification 150watts/sq metre).

Typical timber floor build-up - Duo Deck

The Drain and Deck are supported by plywood held in place between the floor joists by battens.

The Deck is covered by a self-adhesive waterproof membrane supplied as a Floor Membrane Kit.

The wall is sealed with a waterproof Wall Membrane.

The internal corner of the wetroom is protected using a Pre-formed corner, while the wall-floor horizontal joints and wall-wall vertical joints are sealed with reinforcing tape.

Three simple steps to order your Timber Floor solution

Flow rate up to
68 L/min

Mono Deck

One-way fall with linear drain

Flow rate up to
41 L/min

Duo Deck

Two-way fall with linear drain

Flow rate up to
24 L/min

Quattro Deck

Four-way fall with square drain

1 Deck & Drain

The preformed engineered slope on all Decks guarantees a perfect gradient every time.

Choose either the Mono Deck or Duo Deck for large format tiles, or the Quattro Deck for mosaic tiles.

Each Deck features a multi-directional trap for ease of installation.

For Mono and Duo Decks, additional traps can be added to increase the flow rate.

Tilesure
Floor Membrane Kit

Floorsafe
Floor Membrane Kit

2 Floor Membrane Kit

It is essential to ensure your wetroom is correctly waterproofed.

Choose from either a Tilesure or Floorsafe Kit. Both Kits comprise a Floor Membrane, Primer, Pre-formed corners and Reinforcing Tape.

Wallsafe
Wall Membrane

Wallsafe
Reinforcing Tape

Tilesure
Reinforcing Tape

Floorsafe
Reinforcing Tape

3 Wall Membrane & Tape

Use Wallsafe to waterproof the walls within and around the shower area.

Use Reinforcing Tape for sealing critical Wall-Wall and Wall-Floor joints.

Ensure the correct Tape is used with the appropriate Floor Membrane Kit.

Mono Deck - How to Specify

Designed for use with large format tiles, Mono Dec is a trimmable wetroom base for timber floors, with a one-way fall towards a linear drain, therefore eliminating the need for diagonal tile cuts.

When choosing the correct kit please take the following into consideration:

- Size of the required shower area
- Position of the drain – On the long wall or short wall
- Number of traps – 1, 2 or 3
- Finish of the linear grill – Type G1 Solid or G3 Stone-Infill
- For grill lengths see Mono Kits on p15

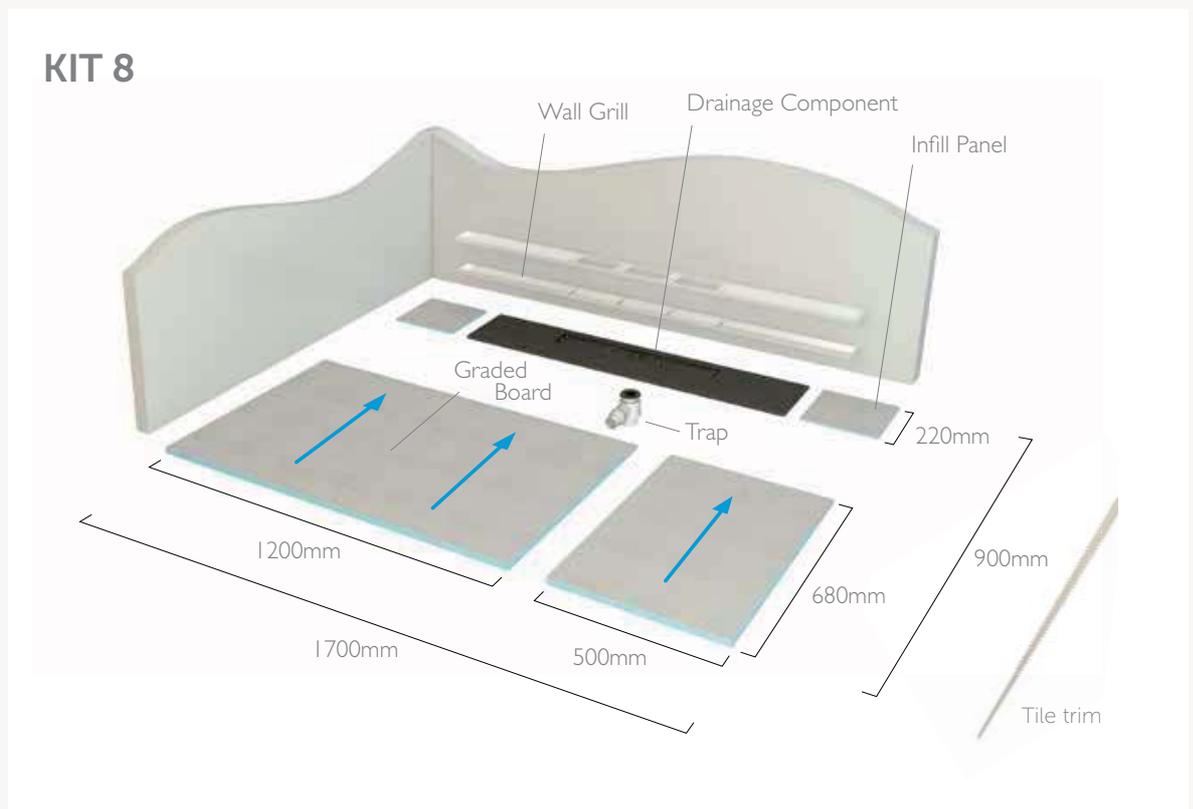

For grill lengths see Mono Kits on p15. Simply choose the nearest kit to the required size of the shower area.

Remember - The width and length can be trimmed on-site to achieve the required size.

Example below shows Kit 8, trimmed to suit a shower area:

- Drainage Component*
- Single Horizontal Trap
- Infill Panel*
- Graded Board*
- G3 Wall Grill
- Stainless Steel Tile Trim

* Trimmable on-site

Drainage Component

The Drainage Component is the central element of the Mono Deck System, once in position, the rest of the system is built around it.

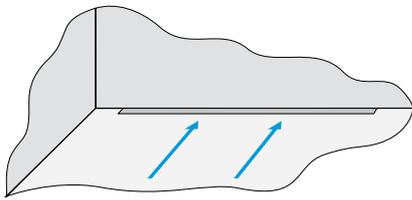

- Width can be trimmed on-site
- Available with 1, 2 or 3 wastes
- Single trap up to 24 L/min
- Double trap up to 41 L/min
- Triple trap up to 68 L/min
- 360° Rotatable trap with 42mm outlet
- Trap can be positioned off-center to avoid joists
- Single trap supplied as standard, additional traps can be added as required.

Linear Grill

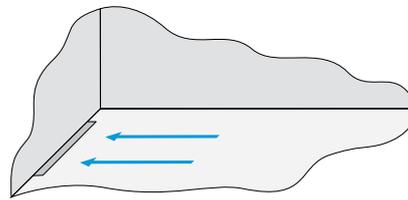

The Mono Deck is supplied with a Linear Grill, which is neatly positioned against the wall, therefore eliminating the need for angled tile cuts. The grill will be supplied up to 300mm shorter than the overall shower.

i.e. Kit 8 (see p12) has a maximum size of 1800mm x 1000mm with the drain positioned against the long wall, therefore the grill supplied is 1500mm. Simply choose either G1 Solid or G3 Stone Infill.

Drain positioned against the long wall.

Drain positioned against the short wall.

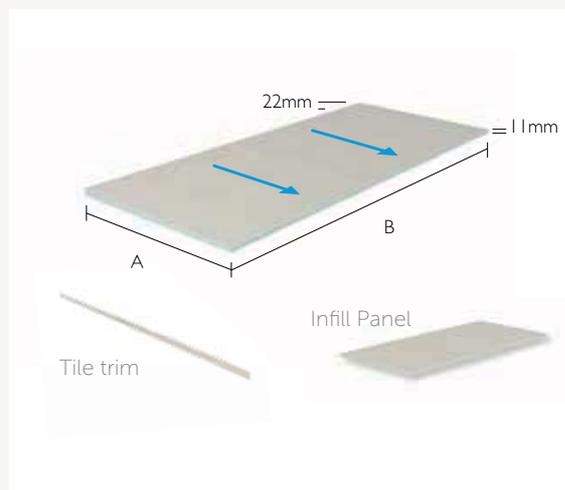

Graded Board

The Graded Board provides an easy to install one way-fall towards the linear drain. Manufactured from high density XPS, they are trimmable along both dimension A & B, allowing a shower area to be created of almost any size.

- 22mm to 11mm gradient
- Trimmable
- High compressive strength
- Supplied with stainless steel Tile trim
- Fixing washers included
- Easy to install - no angled tile cuts

Infill Panel

- 11mm thickness
- Trimmable
- Fixing washers include

* All of our wetroom products are covered by the Novellini Product Lifetime Guarantee. Our guarantee is valid only if used with Novellini products and does not cover installation.

Timber Floor - Mono Deck

Features of a Mono Deck

The Mono Deck has a single slope one-way fall and can be installed with the linear drain positioned against the long wall or the short wall. The features of a Mono Deck are summarised below:

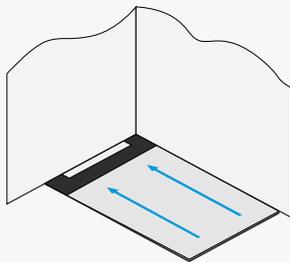

- Single slope one-way fall
- Create a shower area almost any size
- Easy to install
- Easy to tile using large format tiles
- Lifetime Guarantee

Drain position

Positioning the drain against the wall provides a one-way gradient within the shower, ensuring the user is not standing on the drain. This also omits the need for diagonal tile cuts, giving a more stylish look which is both easier to install and maintain.

WET ROOMS

Timber Floor - Waterproofing

A guide to Waterproofing your wetroom

The importance of Waterproofing

The primary concern for anyone choosing to create a Wetroom is whether the floor or walls will either absorb, or worse let water through. Through our painstaking research and development we have created a system that is guaranteed, not just for a few years, but for life. The two components of this system are firstly the floor membrane and secondly the wall membrane, which are the key products for waterproofing the wetroom floor and walls.

We offer two self adhesive waterproof solutions for the floor membrane designed for use prior to the application of ceramic tiles and natural stone onto timber and solid floors in wetrooms:

- **Tilesure** is an evolution of our popular Tilesafe membrane which has been the professional's choice for over 15 years in both the commercial and domestic sectors. Developed specifically for use in bathrooms and wetrooms, Tilesure is comprised of a 1.4mm butyl based membrane with a copolymer top layer, which provides an excellent surface for the adhesion of natural stone, porcelain and ceramic tiles. Tilesure is quick and easy to apply, providing a consistent waterproof layer, guaranteed not to leak.

Tilesure also acts as a decoupling membrane by uncoupling the floor tiles and accommodating movement in the substrate, within a thickness of only 1.4mm. This omits the requirement for a traditional decoupling mat.

- **Floorsafe** – developed as a light weight, easy-fit, domestic product, is a cold-applied self-adhesive membrane which consists of a thin rubberised butyl waterproof layer with a fleece top surface.

For walls we recommend **Wallsafe**:

- A flexible single application paint-on waterproofing membrane, applied to the wall surfaces prior to the application of ceramic tiles and/or natural stone in wetrooms.

Application

For timber floors we recommend that either floor membrane, Tilesure or Floorsafe, is applied to the entire wetroom floor or at least to a distance of no less than 1 metre from the shower area. Wallsafe should then be applied to the walls of the shower area and overlapped onto the Reinforcing Tape.

2 Select Membrane Kit

3 Select Wall Membrane & Tape

Floor Membrane Kits

Tilesure 5m² Kit

500ml Primer, 10m Reinforcing Tape 5m x 1m Membrane 290ml Jointing Compound 4 x Pre-formed Corners

Floorsafe 5m² Kit

500ml Primer, 10m Reinforcing Tape 5m x 1m Membrane 290ml Jointing Compound 4 x Pre-formed Corners

Tilesure 10m² Kit

1ltr Primer, 15m Reinforcing Tape 10m x 1m Membrane 290ml Jointing Compound 4 x Pre-formed Corners

Floorsafe 10m² Kit

1ltr Primer, 15m Reinforcing tape 10m x 1m Membrane 290ml Jointing Compound 4 x Pre-formed Corners

Tilesure and Floorsafe are compatible with electric underfloor heating up to 150kw per m².

Choose from either Tilesure or Floorsafe kits:

Tilesure Kit offers the following features:

- Suitable for timber and solid floors
- Decouples up to 12mm
- Compatible with silicone sealants
- Self-adhesive - quick and easy to apply
- Ready to tile immediately

Floorsafe Kit offers the following features:

- Suitable for timber and solid floors
- Self-adhesive - quick and easy to apply
- Ready to tile immediately

WET ROOMS

Concrete Floor - Guidelines

The Novellini wetroom for solid floors

Floor build-up

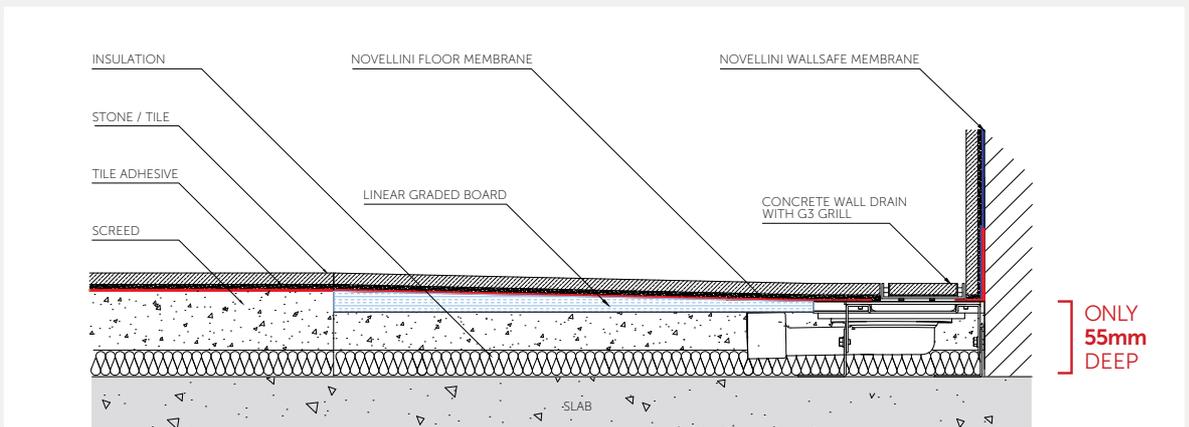

Our range of linear drains has been developed specifically for concrete or screeded floors and can be used on concrete slabs, planks and block and beam floors.

The key feature of the Linear Floor Drain is its height - the total height from the base to the top of the trough being **only 55mm** (see image below), making it perfect for today's modern construction methods.

The drain incorporates a unique 'waterless trap' which has a lifetime guarantee and has been granted BBA approval. For details see below.

Novellini Wetroom floor systems are suitable to be installed in combination with electric underfloor heating (max specification 150 watts/sq metre).

Typical solid floor build-up

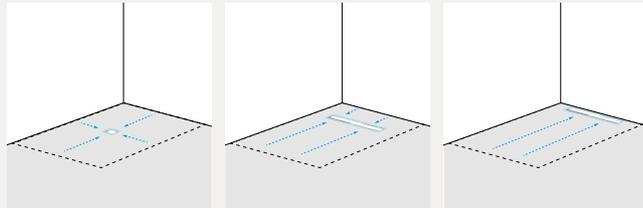

Waterless Trap

All drains are available with one or two traps and a choice of stylish grill finishes. The trap has been specially designed with a spring loaded mechanism which keeps the trap sealed when not in use. This ensures that even when left

unused for prolonged periods the trap cannot dry out, making it ideal for situations where the shower is not in everyday use. The smart design of the linear trough allows the waste position to be rotated through 360° enabling installation in most scenarios with ease.

Four simple steps to order your Concrete Floor solution

Uno4 Drain

Linear Floor Drain

Linear Wall Drain

1 Drain and Grill

The gradient is formed within the screed, typically 12mm from the finished floor level to the drain.

All drains feature a multi-directional outlet for ease of installation.

Linear Drains are available with either Single or Double outlet depending on the flow rate required. Linear Drains are available in several lengths.

Choose either:

- Uno4 Drain - for a four-way fall
- Linear Floor Drain - for a two-way fall or
- Linear Wall Drain - for a one-way fall

2 Graded Board and Tile Trim

Use the Graded Board to provide a pre-formed consistent gradient towards the drain. For all Linear Drains it is important to order a trim detail to define the edge of the wetroom area.

Scredsure
Concrete Floor Membrane Kit

3 Floor Membrane Kit

It is essential to ensure your concrete floor wetroom is correctly waterproofed using a Scredsure Floor Membrane Kit.

Wallsafe Membrane

Wallsafe Reinforcing Tape

Additional Reinforcing Tape
Scredsure Reinforcing Tape

4 Wall Membrane & Reinforcing Tape

Use Wallsafe on the walls within and around the shower area. Use Reinforcing tape for sealing critical Wall-Wall and Wall-Floor joints.

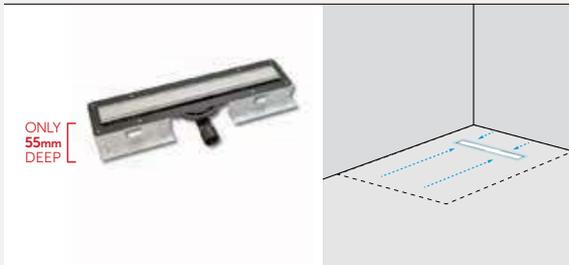

Concrete Floor - Drain and Grill

Uno4 Drain - 4 way fall

Features of the Uno4 Drain

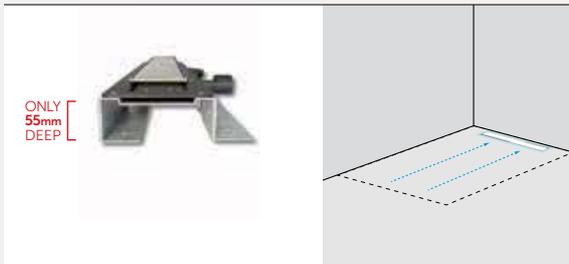

- Height adjustable drain body
- 360° Rotatable waste position
- Horizontal (height 138-255mm) & Vertical (height 55-88mm) trap options
- Flow rate up to 24 L/min
- Height adjustable grill
- Grill size 130mm x 130mm
- Lifetime Homes compatible

Linear Floor Drain - 2 way fall

Features of a Linear Floor Drain

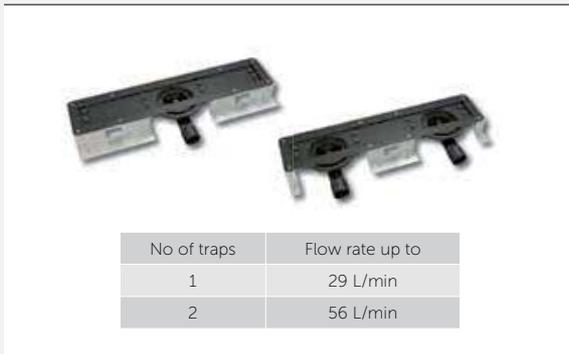

- Height adjustable 55-88mm
- BBA approved
- Lifetime Guarantee
- 360° rotatable waste position
- Waterless trap
- Flow rate up to 50 L/min
- Height adjustable grill
- Easy to clean and replace trap
- Bespoke design available
- Grill width 86mm, grill lengths from 600 - 2000mm

Linear Wall Drain - 1 way fall

Features of a Linear Wall Drain

- Height adjustable 55-88mm
- BBA approved
- Lifetime Guarantee
- 360° rotatable waste position
- Waterless trap
- Flow rate up to 50 L/min
- Height adjustable grill
- Easy to clean and replace trap
- Bespoke design available
- Grill width 86mm, grill lengths from 600 - 2000mm

Features of the Drain and Trap

- BBA approved
- 360° rotatable waste position
- Easy to clean and replace trap
- No requirement to top up the trap during long periods of non-use
- No siphoning of the trap due to other appliances
- No chance of smells or gases entering the room
- Available with one or two traps

2 Select Linear Graded Board and Trim

Linear Graded Board

Tile Strip:

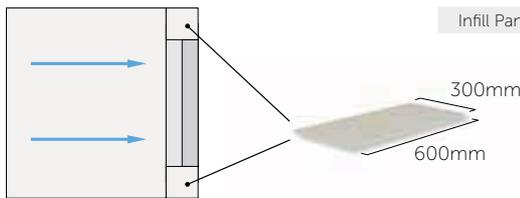

These boards reduce installation time and guarantee the perfect gradient by using the slope of the board rather than screed to create the fall.

ITEM	CODE	DIMENSIONS (mm)		£ INC VAT
		A	B	
Board 1	LINGB300	300	1200	
Board 2	LINGB500	500	1200	
Board 3	LINGB700	700	1200	
Board 4	LINGB800	800	1200	
Board 5	LINGB900	900	1200	
Board 6	LINGB1000	1000	1200	
Board 7	LINGB1100	1100	1200	
Board 8	LINGB1200	1200	1200	
Board 9*	LINGB1500	1500	1200	

*Supplied in two pieces

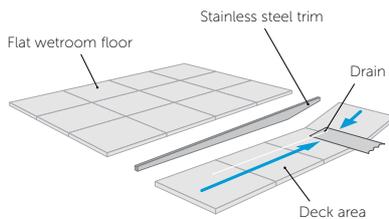

Infill Panel

Infill Panel	LINIP1	300	600	22.80
--------------	--------	-----	-----	-------

Infill Panels are used for configurations where the width of the Linear Graded Board exceeds the width of the drain. Infill panels come in a standard 300 x 600mm format, but can be trimmed to suit your installation.

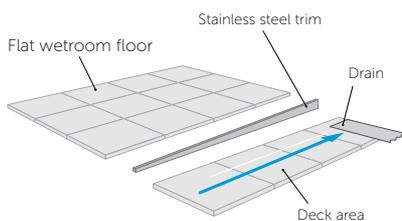

Linear Floor Drain Trim detail (Two-way fall)

ITEM	CODE	DIMENSIONS	£ INC VAT
Tile strip 1	NWFSS1	300/600mm	
Tile strip 2	NWFSS2	600/600mm	
Tile strip 3	NWFSS3	300/900mm	
Tile strip 4	NWFSS4	300/1200mm	
Tile strip 5	NWFSS5	300/1500mm	
Tile strip 6	NWFSS6	900/900mm	
Tile strip 7	NWFSS7	300/700mm	

Supplied separately, the trim provides a stylish stainless steel finish detailing the difference in tile heights where the sloping wetroom floor meets the flat wetroom floor.

Linear Wall Drain Trim detail (One-way fall)

WET ROOMS

Concrete Floor - Waterproofing

A guide to Waterproofing your wetroom

The importance of Waterproofing

The primary concern for anyone choosing to create a wetroom is whether the floor or walls will either absorb, or worse let water through.

Through our painstaking research and development we have created a system that is guaranteed, not just for a few years, but for life.

The two components of this system are Scredsure and Wallsafe - products for waterproofing the wetroom floor and walls.

Scredsure is a copolymer self-adhesive waterproofing membrane specifically designed for use onto screeded and other solid floors in wetrooms and bathrooms.

Scredsure is comprised of a 1mm butyl based membrane, with a fabric top layer, providing an excellent surface for the adhesion of natural stone, porcelain and ceramic tiles.

Scredsure is quick and easy to apply, providing a consistent waterproof layer, guaranteed not to leak.

For walls we recommend **Wallsafe**:

A flexible single application paint-on waterproofing membrane, applied to the wall surfaces prior to the application of ceramic tiles and/or natural stone in wetrooms.

Application

For solid floors we recommend that the Scredsure membrane is applied to the shower area plus an additional one metre in either direction.

Wallsafe should then be applied to the walls of the shower area and overlapped onto the Reinforcing Tape.

3 Select Membrane Kit

4 Select Wall Membrane & Tape

Floor Membrane Kit

- Suitable for solid floors only
- Self-adhesive - quick and easy to apply
- Ready to tile immediately
- Ideal for fast track construction
- Supplied as a kit
- Factory controlled thickness
- Compatible with electric underfloor heating up to 150kw per m²

Scredsure 5m² Kit

500ml Primer, 10m Reinforcing tape, 5m x 1m Membrane, 290ml Jointing Compound
4 x Pre-formed corners

Scredsure 10m² Kit

1ltr Primer, 15m Reinforcing tape, 10m x 1m Membrane, 290ml Jointing Compound
4 x Pre-formed corners

ITEM	CODE	PRICE £ INC VAT
5m Roll + Ancillaries	SSURE5	
10m Roll + Ancillaries	SSURE10	

Additional Reinforcing Tape

Scredsure Reinforcing Tape

10m roll

A self-adhesive reinforcing tape for use with Scredsure. Reinforcing tape is 125mm wide.

ITEM	CODE	PRICE £ INC VAT
Scredsure Tape 10m	TAPEU10	

Wall Membrane

Wallsafe Wall Membrane

Wallsafe Reinforcing Tape

Wallsafe Membrane

- Quick and easy single coat application
- Compatible with Tilesure and Floorsafe
- Solvent free - covers up to 8m²
- Suitable for all commonly encountered substrates

Wallsafe Reinforcing Tape

- 75mm wide x 10m
- Self-adhesive
- For use in corner wall junctions, vertical joints, soap recesses and other such detail

ITEM	CODE	£ INC VAT
Wallsafe Liquid 8kg	WSAFE8	
Wallsafe Tape 75mm	WSAFET10
